WMS Project Preparation Brief

Prepared 2026-10-20 | Your warehouse project at a glance

Executive summary

Customer project preparation: Ready for detailed evaluation. This describes your implementation preparation; Quark core WMS operations are implemented.

Business profile	Your stated position
Primary industry	Fashion & Apparel
Additional industries	E-commerce
Operating models	Own Inventory, E-commerce Fulfillment
Warehouse footprint	1 warehouse
Active users	12 active users
Daily volume	250 orders per day
Current systems	Paper / spreadsheets / manual processes; ERP: No ERP in use

Your top 3 actions

1. Investigate picking errors

Trace a picking error from detection through correction with a supervisor.

Why: This is a reported priority, not a diagnosed defect or promised improvement.

2. Investigate too much manual work

List duplicate entry/manual decisions with process owners and retain necessary controls.

Why: This is a reported priority, not a diagnosed defect or promised improvement.

3. Prepare a return-to-disposition scenario

Document return inspection, condition, disposition and restocking responsibilities.

Why: Returns were explicitly requested.

Customer preparation brief. Specialist fit, certification, costs and rollout are scoped separately.

Complexity and readiness

Operational scope and implementation preparation are assessed independently.

Operational complexity factors

Dimension	Stated factors and open questions
Process Variability	Process variation: One broadly consistent set of processes; Packing: Channel / customer-specific rules
Inventory & Traceability	Tracking: Quantity only; Ownership: One owner; Units: A single handling unit; SKU variants: Yes / required
Integrations	Connections: No external connections planned
Automation	RF/mobile: Not currently used or planned; Equipment: No automation in scope
Multi-owner Operations	Ownership: One owner
Deployment Replicability	Sites: 1

Not assessed from these answers: Compliance. No requirement is inferred.

Implementation readiness: Ready for detailed evaluation

Preparation area	Your stated preparation
Master data	Available, reviewed and consistent
Requirements	Documented and agreed with process owners
Project owner	An owner is assigned with time allocated
Budget basis	A planning basis and decision process are agreed
Operations and IT	Agreed and assigned
Acceptance tests	Agreed and assigned
Target window	Considering a start in 6-12 months

Unknown answers are open questions, not failed checks. Scale, industry and complexity do not lower this readiness result. Full answers follow in the appendix.

Preparation and discovery

Use the following items to prepare an internal project meeting or supplier discussion.

Further preparation tasks

Complete the three actions on page one, then work through the remaining findings below. Priorities follow your answers; they are not estimates of effort.

4. Validate catalog variants

Review parent/variant identifiers and sample size/colour/style records with the catalog owner.

Why: Variant requirements were explicitly stated.

Based on your answers: Size / colour / style or other SKU variants: Yes / required

Requirements you explicitly reported

These are your stated requirements. Specialist rules and connections need project-specific validation.

Requirement	Your answer
Required tracking	Quantity only
Units of measure	A single handling unit
Required integration categories	No external connections planned
Size / colour / style or other SKU variants	Yes / required
Returns / inspection workflow required	Yes / required

Discovery topics to validate

Your industry and operating model select these topics. They do not establish applicable regulations, mandatory features or supplier compatibility.

Topic for discussion	Why it was selected
What product, return and packing variations matter?	Industries: E-commerce, Fashion & Apparel; Operating models: Own Inventory, E-commerce Fulfillment

Candidate supplier-evaluation scenarios

These scenarios support customer acceptance planning. Specialist requirements and connections are verified within the project scope.

Choose representative normal and exception cases with a process owner and validate with shortlisted suppliers.

Candidate scenario	Reason to evaluate it
Return inspection and disposition	Return handling is explicitly requested.
Receiving and putaway	These workflows are in the stated scope. Use a representative receipt and storage exception.
Picking and shipping evaluation	An outbound workflow is in scope; select a representative order and exception.

Keep operational details within your organisation unless sharing is authorised. Contacting Quark is optional and never attaches this report automatically.

This brief assesses customer project preparation. Quark provides implemented core warehouse operations. User-reported requirements, specialist capabilities and external connections need project-specific validation. This is not compliance certification, a cost/ROI/effort estimate or go-live approval.

Appendix: your complete answers

Generated 2026-10-20T17:00:00.000Z | Taxonomy 0.1.0 | Rules 0.2.0 | JSON schema 2.0.0

Only questions in your active assessment path are included. Not specified means unknown, not no. Full answer-to-rule traceability remains in the structured JSON export.

Which industries does this warehouse serve?

Question detail	Your answer
Industries	E-commerce, Fashion & Apparel (primary)

How does the warehouse operate?

Question detail	Your answer
Operating models	Own Inventory, E-commerce Fulfillment

What scale should the discussion cover?

Question detail	Your answer
Warehouses	1
Active warehouse users	12
Approximate daily volume	250
Volume unit	Orders per day

What inventory rules are actually required?

Question detail	Your answer
Required tracking	Quantity only
Inventory ownership	One owner
Storage environment	Ambient
Order channel	B2C
Units of measure	A single handling unit

Which systems and floor technologies are in scope?

Question detail	Your answer
Current warehouse management	Paper / spreadsheets / manual processes
ERP presence	No ERP in use
Required integration categories	No external connections planned
RF / mobile warehouse operations	Not currently used or planned
Automation equipment in use or planned	No automation in scope

Which workflows, variations and problems matter?

Question detail	Your answer
Warehouse workflows	Receiving, Putaway, Picking, Packing, Shipping
Process variations	One broadly consistent set of processes
Important operational problems	Picking errors, Too much manual work

What is prepared for a supplier evaluation?

Question detail	Your answer
SKU and location master data	Available, reviewed and consistent
Operational requirements	Documented and agreed with process owners
Internal project owner	An owner is assigned with time allocated
Budget readiness	A planning basis and decision process are agreed
Intended implementation horizon	Considering a start in 6-12 months
Operations and IT stakeholders	Agreed and assigned
Representative tests and exception scenarios	Agreed and assigned

What product, return and packing variations matter?

Question detail	Your answer
Size / colour / style or other SKU variants	Yes / required
Returns / inspection workflow required	Yes / required
Packing and branding rules	Channel / customer-specific rules
Order-channel peak variability	Significant peak / channel variation
